

Photoshop adds the **timeline** when opening the .avi file

Re-size the file proportional to the width, as you would with a photo.

*TIP, click and drag the **playhead** to the right on the timeline so you have a reference of how this will look.

Export the resized .avi:
File > Export > Save for Web

Change settings as shown
(larger on next page)

Colors - this can be reduced if the animation has fewer colors (smaller file size)

Animation Looping Options - All of these have been set up to continuously loop. This should be set to "Forever".
